

# 基于XILINX的 工业&医疗 影像增强IP

# CORECAM®

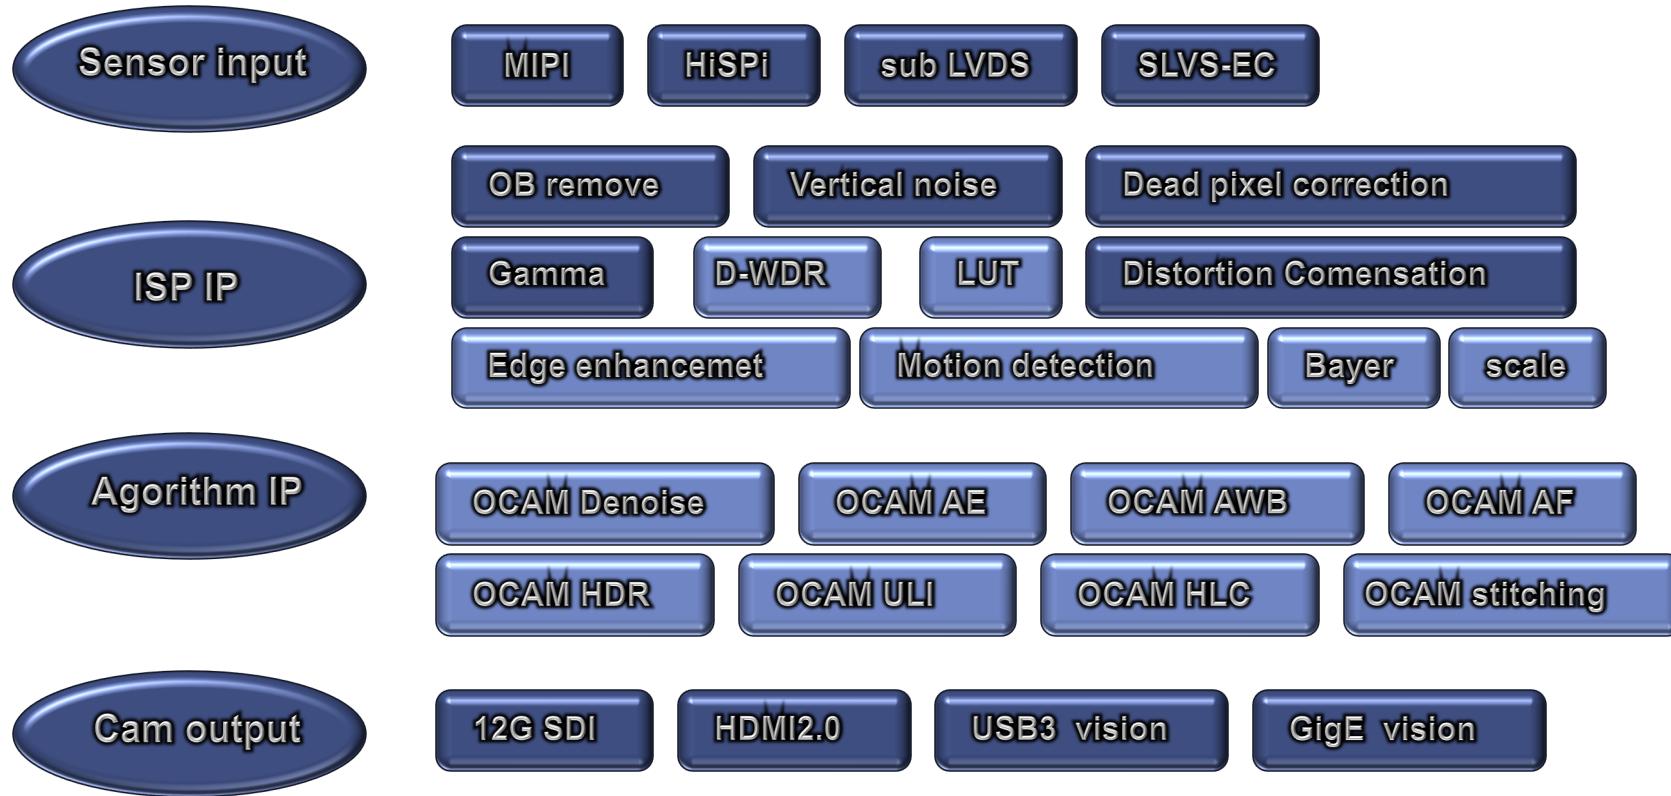

Name 吴志鹏  
Date 2019.05

# 基于XILINX的 工业&医疗 影像IP

Based on Xilinx

# OCAM 工业&医疗 影像IP

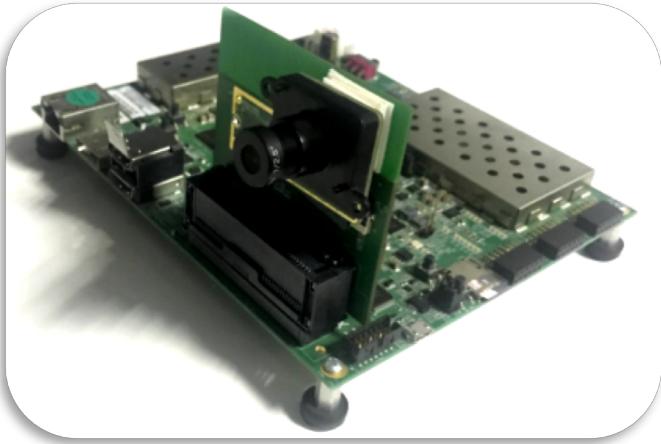

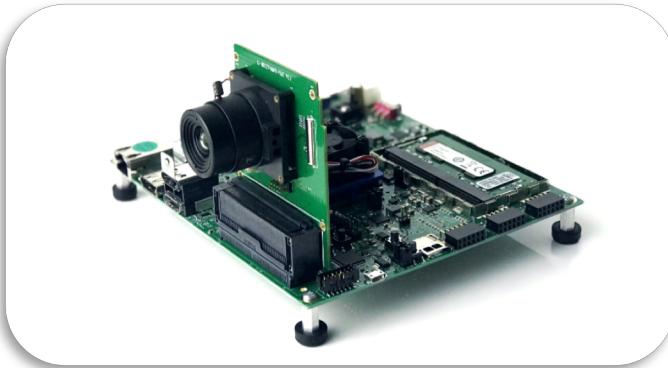

# Target FPGA Device

**OCAM IP can run on general FPGA and SOC**

- Spartan
- Artix
- Kintex
- Virtex
- Zynq-7000 SoC
- Zynq UltraScale + MPSOC

# OCAM IP on XILINX

## ➤ ZCU104 Evaluation Kit

Xilinx UltraScale+ MPSOC - XCZU7EV

- a quad-core ARM Cortex-A53 applications processor
- dual-core Cortex-R5 real-time processor
- Mali-400 MP2 GPU
- 4KP60 capable H.264/H.265 video codec
- 16nm FinFET+ programmable logic

## ➤ IMX274 sensor Board

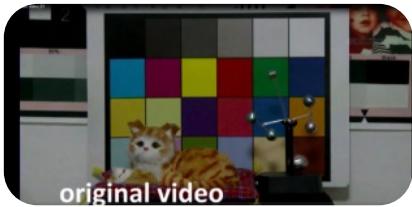

## ➤ AR0231-RCCB sensor Board

## ➤ XGS-12M sensor Board

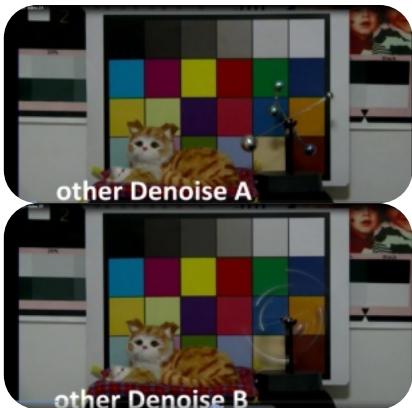

Full test 4K60  
on Xilinx platform

# Denoise for image

Original video

Other Denoise

OCAM Denoise

# Ultra low illumination for image

# Ultra low illumination for image

- 路测对比、相同的测试场景

- 右侧为海康DS-2DF8237I5W-AW；左侧为使用OCAM ISP的IPC效果

- OCAM IP在低照度下的优秀的噪声表现、精准的色彩还原、良好的强光抑制效果

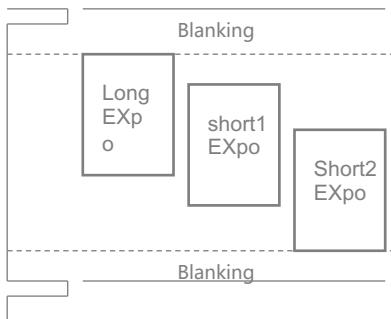

# HDR for image

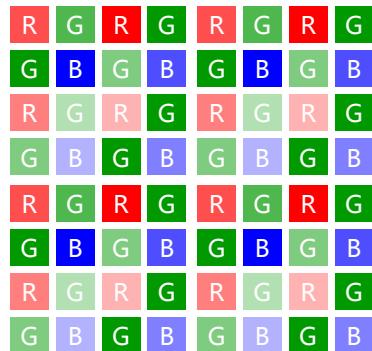

- Different from WDR, physically increase the dynamic range
- The acquired HDR technology is strongly correlated with the sensor characteristics

# HDR characteristic sensor

DOL

SMC

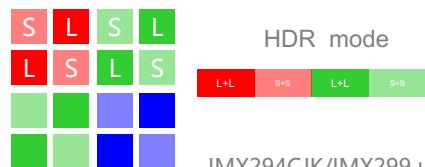

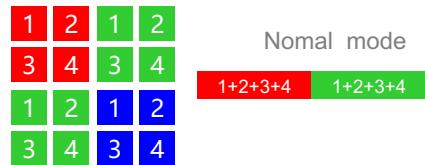

IMX214 uses this technology

DOL - 'Quasi-simultaneous' outputs multiple frames of images with different exposure times. After receiving multiple frames of images, the ISP can perform image fusion to generate HDR images

The maximum long exposure time is not wasted, and accessible ISP output frame number, and the fluency is not reduced. Second, the exposure end time difference is very short, and there is almost no defect of the motion boundary

QBC

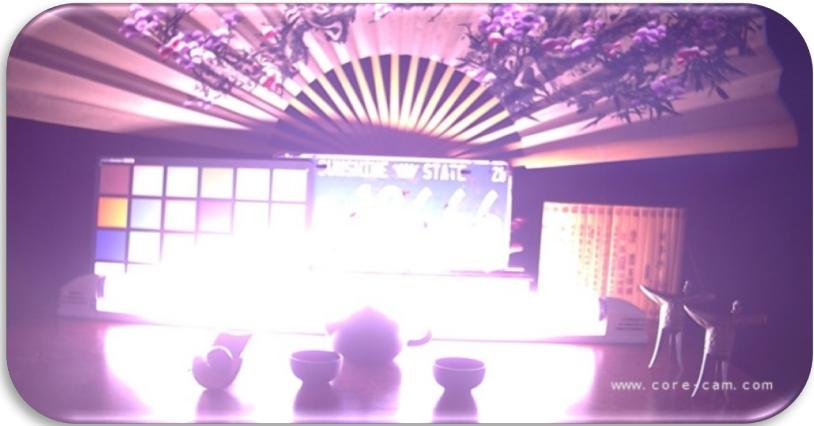

IMX294CJK/IMX299 uses this technology

# DOL HDR for image

- 曝光比高至256x【48dB】
- 精准的亮度融合、噪声抑制

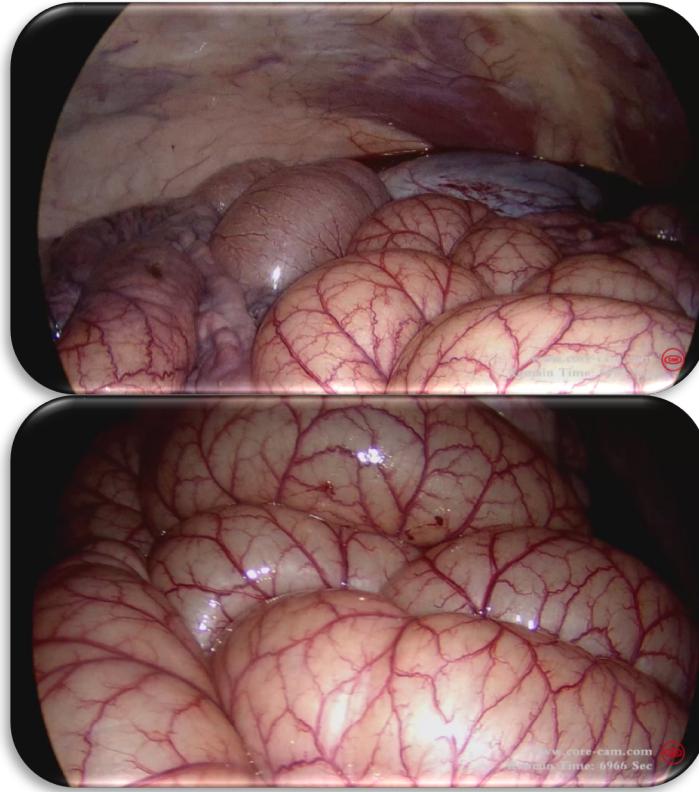

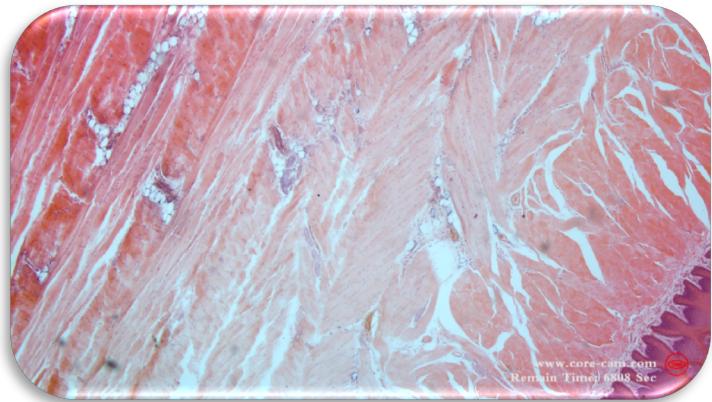

# High Light Compensation for image

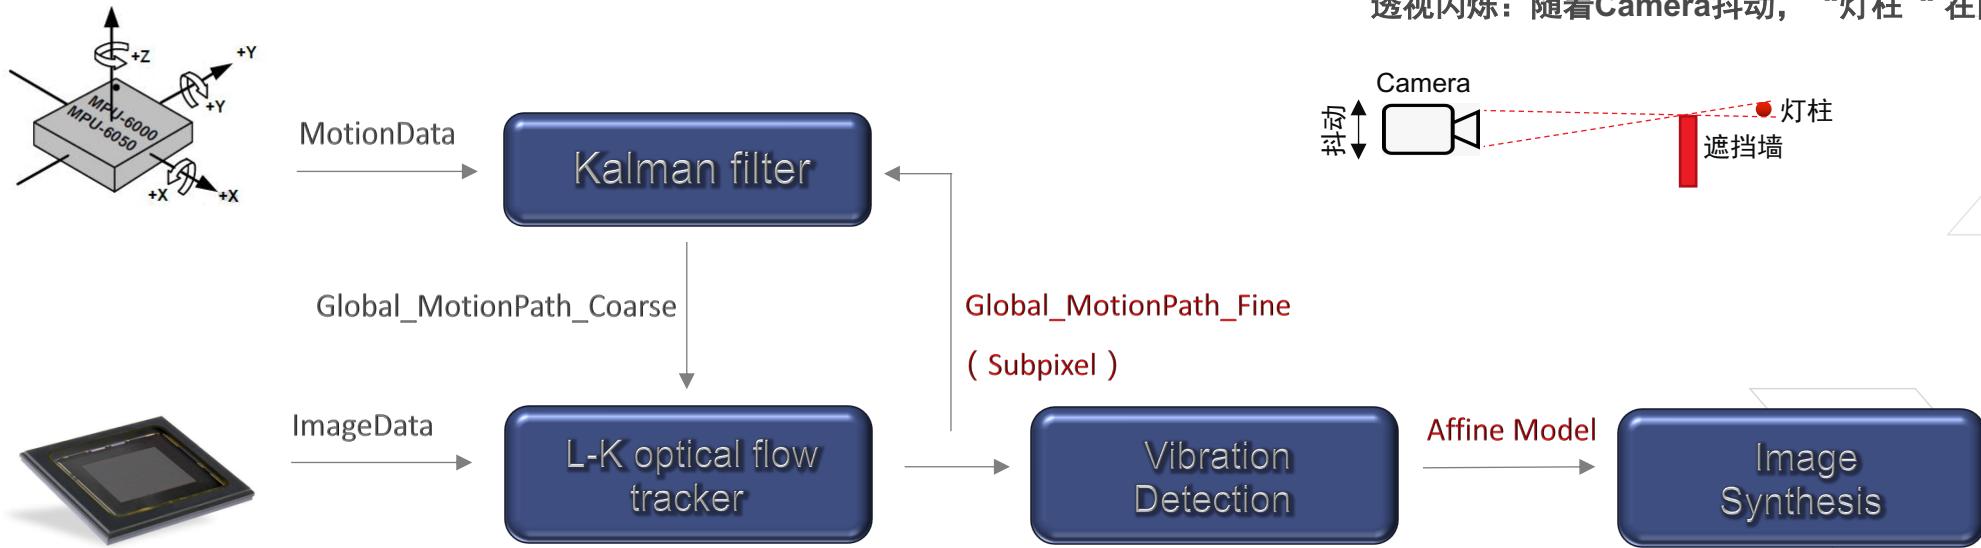

- Eliminate the effects of the luminance and chrominance domains

# LUT for Medical image

- Accurate color reproduction
- sWDR
- High Light Compensation
- Adaptive 2A tech

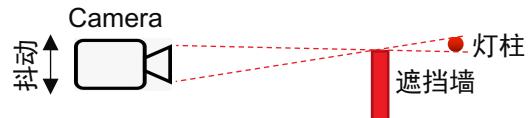

# EIS for Medical image

不能解决的问题：

透视闪烁：随着Camera抖动，“灯柱”在图像中时有时无

能解决的问题：

1. 悬臂Camera去抖。
2. 手持Camera去抖。
3. 根据运动速度选择最优的曝光时间，减轻运动模糊。

# Flexible AE customization

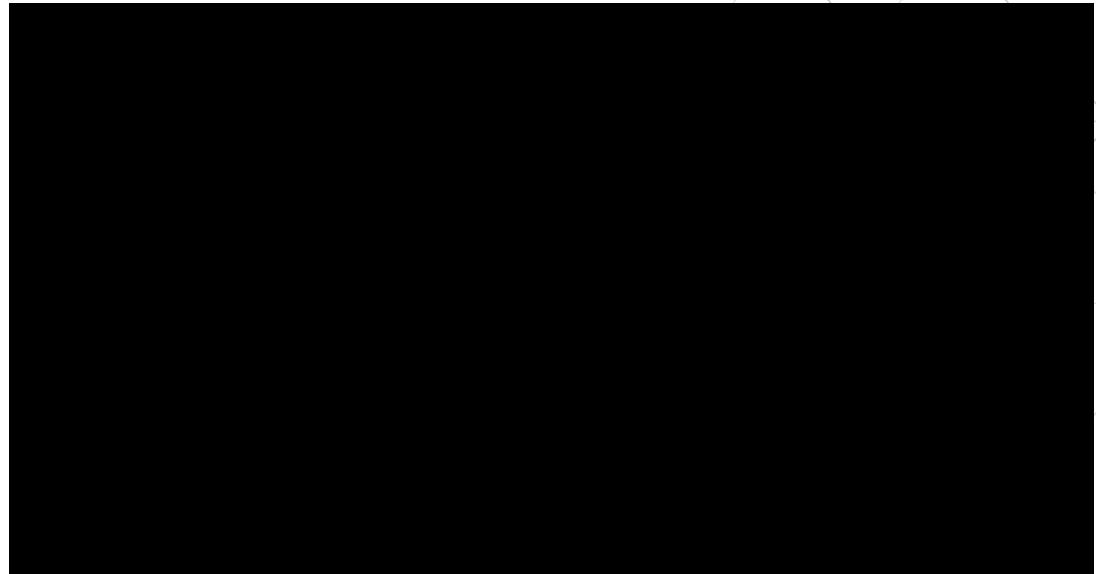

Backlight

Black  
Background

Stability

# Adaptable AWB

Light Blue

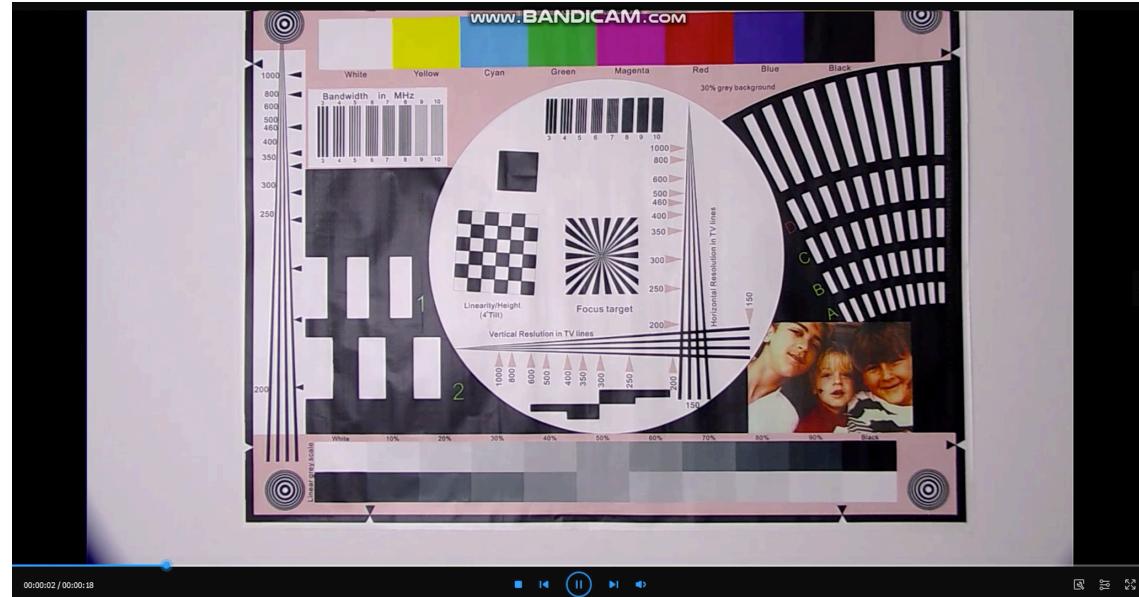

Pink

# Stable AF

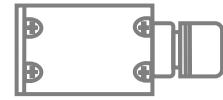

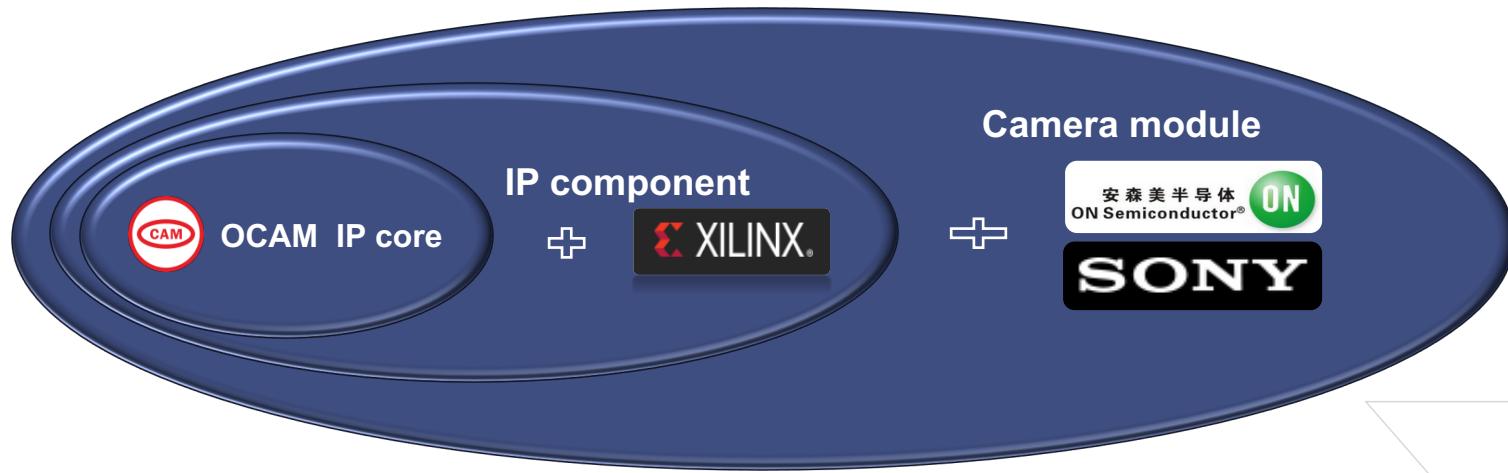

Tracking

Focus stable

# OCAM's next Step Based on XILINX

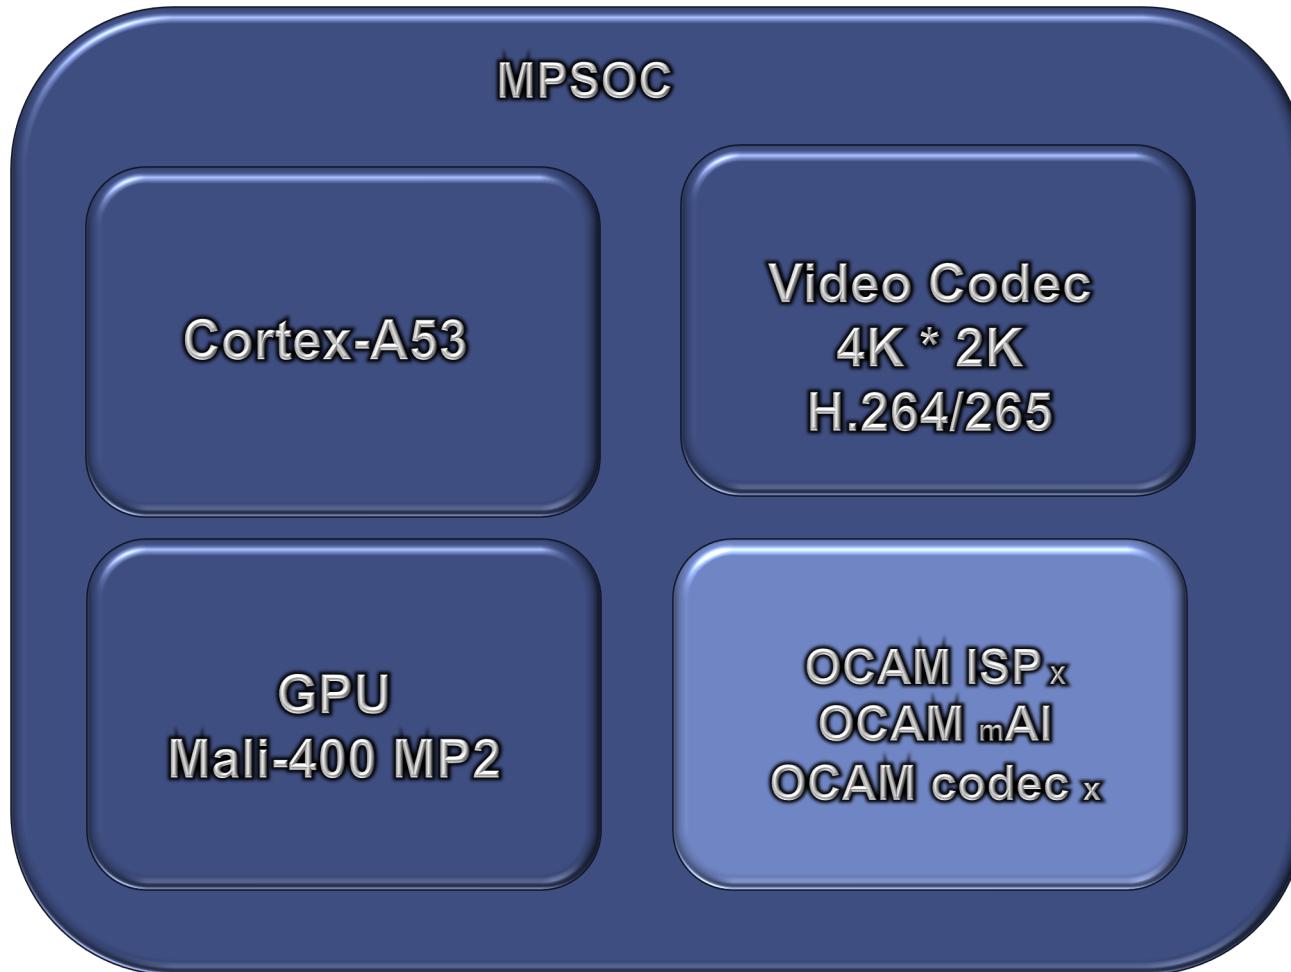

Industrial and machine vision

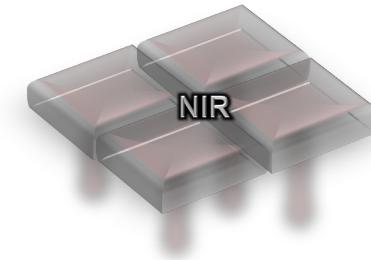

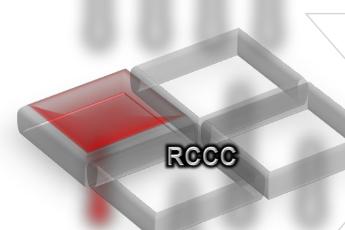

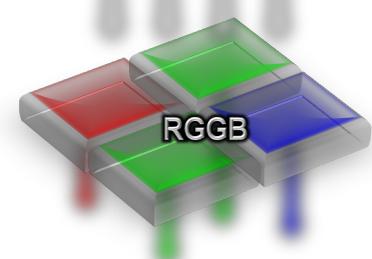

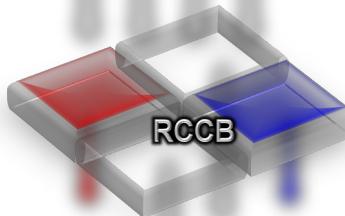

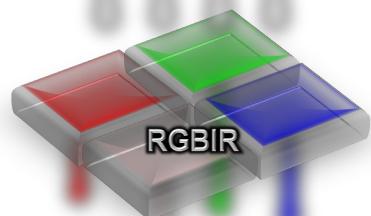

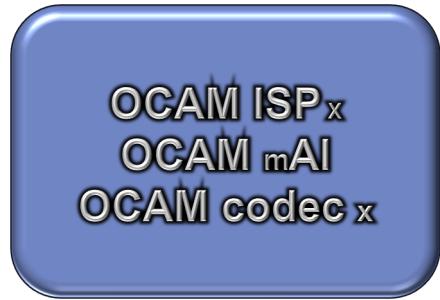

Medical camera

# OCAM's next Step Based on XILINX

# OCAM's next Step Based on XILINX

- clear vision
- more light throughput than RGGB
- more than eye

# OCAM's next Step Based on XILINX

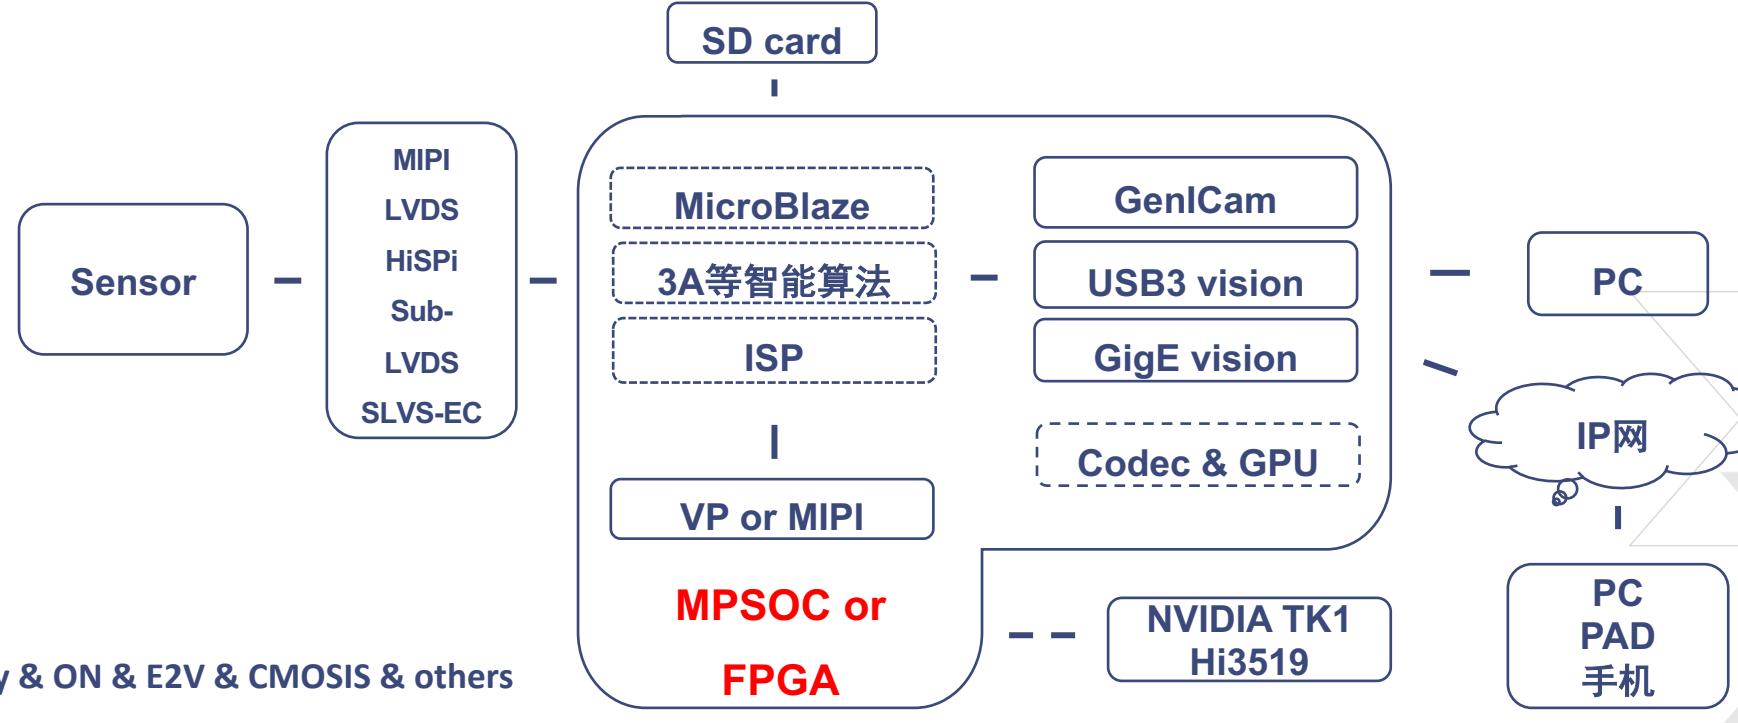

## Video Cross-linking

# OCAM & Others

	Other ISP IP Company	Other ISP of ASIC	OCAM
SoftCore operating mode	On-chip RAM, Restricted by space, Cause strategy is simple.	/	Off-chip RAM, 3A & image share the DDR, Rich strategy.
Auto Exposure	Monitor global brightness, Sensitive to changes in the scene, Especially in Overexposed scene .	Various types of data statistics module is simple, AE effect is not good	Monitor area & global brightness, High adaptive . Excellent data statistics module, AE effect is good.
Auto Wbalance	Large area monochrome scene: bad color reduction	Various types of data statistics module is simple, AWB effect is not good	Large area monochrome scene: Accurate color recovery Excellent data statistics module, AWB effect is good.
Auto Denoise & ISP	Simple bayer & enhancement algorithm :Loss of sharpness and fine texture, Removal of large particles noise effect is poor	Unable to customize	Excellent edge retention ; Adapt to all kinds of scenes , such as Mutl-Cam、 video mosaic、 Special resolution.
Other	Nomal Color gamut reduction module. Suitable sensor species less.	AF tuning cycle is longer. Interface type less	3-D Color gamut reduction. Rich interface adapter for all types of sensor; Short development cycle. Rich interface adapter.

# OCAM IP core list

IP module	remarks
MIPI/CSI	MIPI IN & OUT
HiSPi	Commonly used ON/Aptina sensor
LVDS/sub LVDS	Commonly used SONY/CMOSIS/ON sensor
SLVS-EC	Commonly used SONY sensor
3G/6G/12G-SDI	SDI Video OUT
HDMI1.4/2.0	HDMI Video OUT
USB3.0 【USB vision】	UVC & USB vision
GigE vision	GigE vision
OSD	/
Bayer-L	Normal Bayer Conversion
Bayer-H	Super Bayer Conversion for edge and color
OCAM Edge-Enhance	Clear vision & 2D Denoise
OCAM 3D-L	3D-Denoise,for Normal illumination
OCAM 3D-H	3D-Denoise,for Low illumination
OCAM D-gain	/

IP module	remarks
OCAM WDR	Matching with Low illumination
OCAM HDR	large illumination difference
OCAM Pre-filter	for Low illumination
OCAM E-ptz-L	Limited - range
OCAM E-ptz-H	Full - range
OCAM Gamma	/
OCAM Color-Matrix	/
OCAM Exposure	/
OCAMW-balance	/
OCAM-Focus	/
OCAM-Guide	/
OCAM-Sync	/
OCAM-ULI	Ultra low illumination camera
OCAM-HLC	Highlight Compensation

Adaptable.  
Intelligent.
