

Xilinx Adapt Automotive *DMS is here, and OMS is coming...are you ready?*

14 January 2021

Mike Lenne, PhD – Senior VP, Fleet & Human Factors
Kevin Tanaka – Senior Director, Automotive Marketing

TECHNOLOGY TO DRIVE A SAFER WORLD

Industry leading **operator state monitoring technology** that enhances transport related safety and operational performance in real time in the real world.

Global and local **partnerships and collaborations** that underpin industry acceptance and the efficacy of our technology.

Applied Human Factors approach to our current and future technology development and validation.

- Global company, based in Canberra with over 200 full-time employees, listed on London Stock Exchange (AIM: SEE).
- Offices and people in UK, Europe, USA, Asia.

TRANSPORTATION MARKET FOCUS

WHAT WE DO - *Monitoring of Humans for Transport Safety*

OEM Business

FOVIO driver monitoring technology platform

Leadership position in Driver Monitoring Systems (DMS), globally

DMS debuted in GM Cadillac CT6 Super Cruise 2018

Engaged by 6 global automotive OEMs to deliver DMS across 9 programs

Extensive work with leading aircraft OEMs, carriers, simulator co. and ATC (air traffic control)

Data driven pilot training and in-cabin pilot attention/drowsiness/incapacitation monitor

Aftermarket Business

Guardian: Pioneering real time driver fatigue/distraction detection and intervention technology

Commercial transport and logistics focus globally

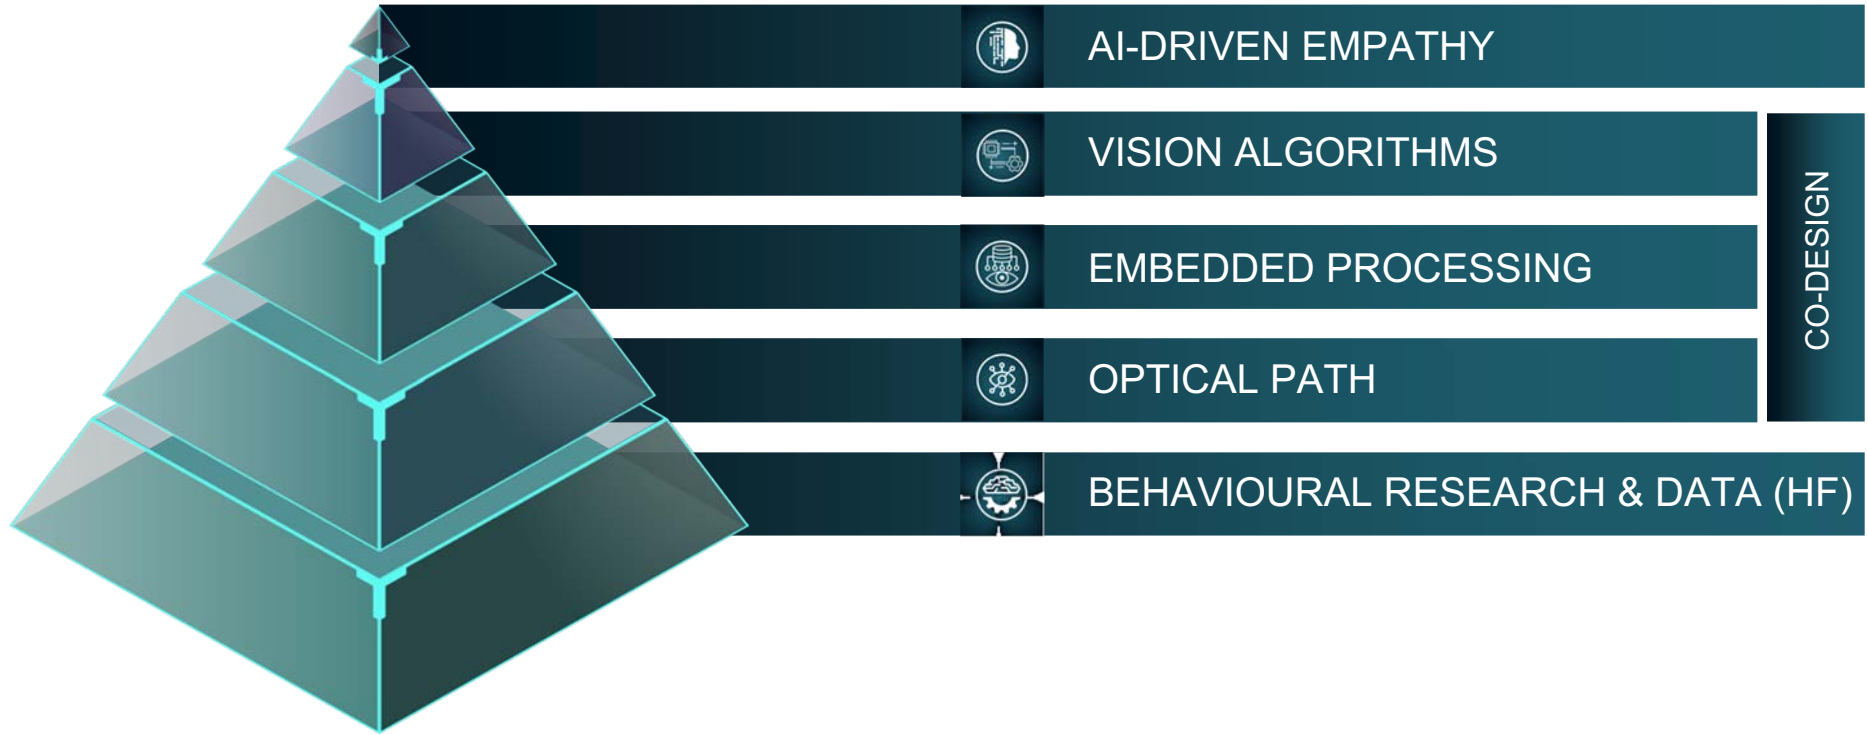

Expanding global footprint with >20,000 connections in more than 26 countries

Exclusive global mining partner – Caterpillar Inc.

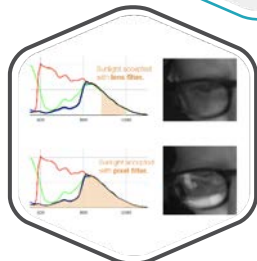

seeingmachines

SEEING MACHINES EXPERTISE

SEEING MACHINES OPTICAL PATH KNOWLEDGE

- Image quality and illumination metrics to achieve eye-tracking performance targets are shared with OEMs.
- Metrics input into requirements.
- We then work closely with Tier Ones to ensure requirements are achieved in any design.

Outcome = DMS that works

Seeing Machines Research & Development and co-design with customers for key optical properties:

- Camera and IR light count and position
- MTF – Image sensor choice and lens design
- SNR – IR light design and imaging filter design

IN-VEHICLE DMS INTEGRATION POINTS (Camera & Processing)

Instrument Clusters

Mirror/Headliners

Infotainment

Standalone ECUs

Central ADAS Compute ECU

Embedded products strategy allows for Best-in-Class Driver Monitoring in multiple in-vehicle locations through *flexible* systems integration

EMBEDDED PRODUCT OFFERINGS OVERVIEW

Gives customers flexibility to decide optimal delivery platform independent of the features/functions required

FOVIO-Chip Family

FOVIO-Engine SW

Maximum Efficiency / Standalone ECU

Maximum Flexibility / Integrated ECU

Seeing Machines FOVIO Driver Monitoring Product Chip Family

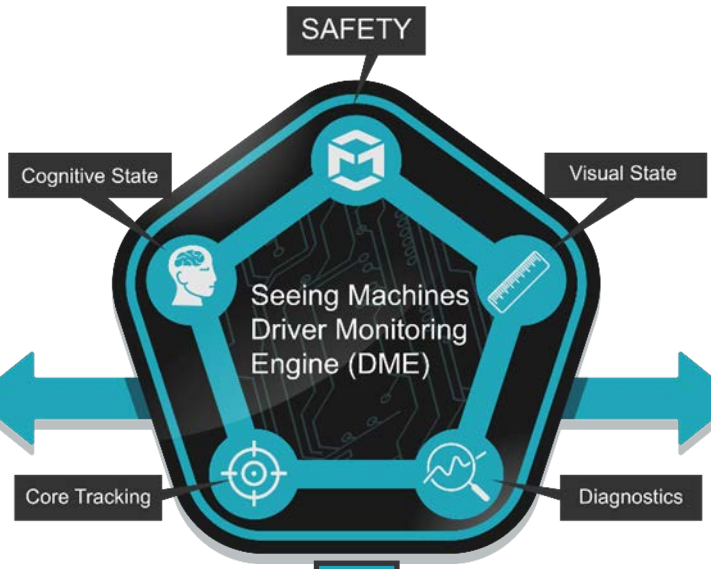

- Full featured DMS in a Chip
- Pre-validated
- Powered by SM's Occula™ NPU Accelerator
- NCAP Ready

FDM Base
NCAP Low Mono Cam

FDM Premium
NCAP High Multi-Cam

FDM Aftermarket
DMS Smart Cam

Seeing Machines FOVIO Driver Monitoring Engine Software

- Embedded DME (e-DME) Libraries
- Highly optimized for ARM platforms
- Ported Acceleration

e-DME Qualcomm
Snapdragon

e-DME Renesas
R-Car

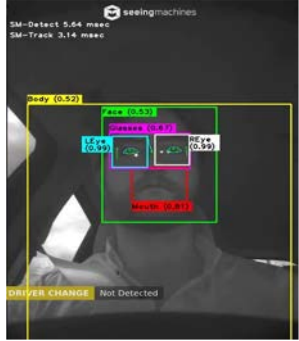

e-DME Xilinx
Ultrascale+

NEW
ASIC Encrypted Occula NPU RTL + FOVIO-Engine (e-DME) Software

FOVIO CHIP FAMILY with Occula™ NPU

| | FDM1CCM1E (XA7Z020-based in CLG400) | FDM1CBM1E (XA7Z010-based in CLG400) | FDM1CAM1E (XA7Z010-based in CLG225) |
|-----------------|---|--|---|
| Recommended For | Development and Very High-End Solutions | Best in World / Feature-rich DMS solutions | Best in Class solution for NCAP/NCAP+ at lowest cost system |

Family of devices and software stack that scales from highest performance and lowest-cost EURO NCAP base solution to full-featured high-end driver monitoring system variants

In collaboration with XILINX

Introduction of SM's new proprietary Occula™ Neural Processing Unit (NPU)

- Single-shot real-time multi-object detection and tracking
- Optimized tracking algorithm that is 1/3 the network size of the previous generation and 1/2 the latency
- Efficient support for multiple occupants and accommodates significantly occluded view of faces/eyes
- Algorithm can be adapted to locate any object type (mobile phones, infant car seats, etc.)
- Tracker specialized for head tracking with face masks (sickness masks)

“FULL STACK” DRIVER MONITORING TECHNOLOGY APPROACH

Impairment, Engagement, Workload

Behaviours: Glances, Fixations, Expressions

Identity: Eye & Face Biometrics

Diagnostics: Spoofing, Blockages, Sun, ...

Real-Time Tracking: Head, Face, Eye, ...

Detection: Driver, Occupant, Phone, ...

Processing and Optical Path Diagnostics

Processing Optical Path

DATA

High-Level Inference Algorithms

Classification of Key Driver Mental States
Expertise in human factors science and machine learning.

Low-Level Measurement Algorithms – Core detection and tracking along with diagnostics

Image and signal processing to extract measurements from video and audio of driver.
Expertise in algorithm techniques and embedded software.

Platform Hardware Technology

Optimized embedded processing and optical solutions.
Expertise in electronics, processing and optics technologies.

Multi-Source Databases

Scientific quality (HF), Crowd-sourced quantity (Guardian)

ROBUST CORE TRACKING = Higher Confidence Driver State

TRUSTED CORE TRACKING and HIGH AVAILABILITY IN REAL WORLD CONDITIONS

Typical driving situation
Driver wearing sunglasses in full sun
1.3MP NIR sensor.

Algorithms control contrast in eye image region by selecting optimal intensity and energy of NIR pulse matched to imager control settings.

Zoom of image in eye region.
Very low contrast eye features.
Just enough information to still track the driver.

High performance core tracking and high availability of signal are absolute requirements for understanding **Driver State** (Distraction/Impairment). Expertise in and co-design of tracking algorithms and optical path control is the way to achieve this. **GARBAGE IN = GARBAGE OUT**

SEEING MACHINES EXPANSION INTO OMS

As we extend our product lines to support occupant monitoring, we address these challenges in three areas of strategic focus:

Ensure that **driver state performance** is NOT compromised.

- Maintain a **5-Star Euro NCAP** capability.
- Ensure safety for **all users in all conditions**.

Create algorithms that use the **highly-optimised acceleration** capabilities of OCCULA™.

- Market-leading computational performance on **FDM Chip** and **CPU**.

Focus on providing **quality features** for the **front seat occupants**.

- Minimise the tracking volume.
- Maximises the image quality.
- Minimise the optical path cost.

Initial Demonstrator uses

+ all SM software EMBEDDED on FDM-CHIP (Z-7010 in CLG225)

Automated Vehicles: will you be fallback-ready?

Future next-level automation does not mean drivers can become complacent. Drivers must remain **fallback-ready** to take back control if necessary. Driver Monitoring Systems and integrated Human-Machine Interfaces (HMIs) could help to keep them **fallback-ready**.

44 participants aged between 20-42 years participated in our study to assess how different HMIs may assist the driver's fallback-readiness when watching videos during automated driving.

This study was conducted in the CARRS-Q Advanced Driving Simulator. Using handheld devices while driving today is illegal and dangerous.

SEEING MACHINES AUTOMOTIVE SAFETY LEADERSHIP

Represent Tier 2 technology suppliers as active participant in the Occupant Status Monitoring Working Group (OSMWG) introducing aspects for testing and validation of DMS sensing performance.

Advising on development of requirements and test procedures for General Safety Regulation 2 (GSR2) for DMS in SAE Level 3 and 4 AD systems.

Presented information on cutting-edge driver monitoring technologies and capabilities.

Due to Seeing Machines' Human Factors data driven research and development, we are viewed as a global expert in the field of Driver Monitoring safety.

SUMMARY

- Continued legacy of industry leading DMS technology
- Extending leadership legacy from DMS to OMS

- Human Factors science approach (human state is hard and there is no substitute for scientific data-driven proof of efficacy)
- Recognized as a world leader by government and safety bodies and advising them in the field of Driver Monitoring Systems and safety (test protocols)

THANK YOU!
